

Inventory And Manufacturing Process Control

Overview:

Inventory and Manufacturing Process Control System is professional stock & process management software giving businesses of all sizes the ability to efficiently track all their inventory related processes.

Manufacturing a product has a long sequence of processes to follow from purchase of raw material to sale finish goods. In this process material is passed further in many steps and if we manage the complete process manually, it may prove to be a very cumbersome task. It's very difficult to track the right location of raw material and it's Quantity. We spend many hours in getting an accurate report of stock, purchase or sale.

Inventory and Manufacturing Process Control System is basically focused on postulating the stock balance, sales record, restore stock, goods record, goods category distribution and reports customizations.

Inventory and Manufacturing Process Control System is an intuitive, easy to use application and has a very user friendly interface.
